DIGITAL INFRASTRUCTURE

**"As we transformed to a Hybrid Cloud Company, UDT provided
excellent guidance to meet our governance requirements as
well as pointing out other areas we needed to address. The
end results were on budget, on time and provided a dramatic
functional and financial impact to our business."**

Regional Healthcare company

Our Digital Infrastructure Services

Our Digital Infrastructure services help organizations that are finding challenges with their current technology, not meeting their needs. UDT helps identify, implement, and enable the right balance of services, applications, and infrastructure necessary to support your digital transformation process.

PUBLIC/PRIVATE CLOUD HYBRID
Find the best balance of cloud infrastructure with a decentralized approach that integrates public, private, and cloud offerings.

HYBRID NETWORKING
Improve cost-efficiency and access by networking existing infrastructure to the cloud.

INFRASTRUCTURE SECURITY
Approach your infrastructure deployment with data protection in mind and a robust security strategy.

GOVERNANCE
Enable complete visibility of your entire digital infrastructure and monitor performance, manage data, and keep it running securely.

LIFT AND SHIFT/REHOST/ DISASTER RECOVERY
Migrate workloads, tasks, and applications with ease while ensuring your data is protected with a disaster recovery strategy in place.

Why Choose UDT?

WE HELP YOU DESIGN AND DEPLOY YOUR SOLUTION
As a provider of end-to-end IT solutions, we can install, configure, integrate, test, & train your staff for the adoption of any technology you need to implement.

WE HELP YOU OPTIMIZE YOUR TECHNOLOGY AND DRIVE VALUE FOR YOUR INVESTMENT
Any infrastructure and upgrade we deploy is rooted in a strategic approach and Agile methodology of delivery. From the moment we start the conversation, we aim to give our clients a solution that will create value for them while setting them up for growth and evolution.
